

# Convex Mirrors

As an aid to safety or as a security device, a convex mirror will protect property and people effectively and economically.

- Impact resistant, long life
- Simple fixing in minutes
- Easy adjustment at any time
- No maintenance required
- Single outlay, long term benefit.

The size of the mirror you require depends on the distance and quality of the image you need. The chart below can be used as a guide.

Diameter	Distance
300mm.....	to 6m
450mm.....	to 8m
600mm.....	to 12m
760mm.....	over 12m

All mirrors are either post mounted or wall mounted, supplied with brackets to suit the application.

**Installation:**

Post Mounted, use 50nb post (62mm diam). Attach bracket to post with the 4 bolts and nuts supplied. Place the mirror into the bracket, tighten the nuts having ascertained that the mirror is in the correct position to give the required visibility from both directions.

Wall Mounted, hold the mirror against the wall to determine the best position to attach the mounting bracket to achieve the desired visibility from both directions, then mount the bracket to the wall at that position with suitable fixings for the substrata. Place mirror into the bracket, tighten the nuts having ascertained that the mirror is in the correct position to give the required visibility from both directions.

**Warranty**

All mirrors carry a one year manufacturers warranty when item has been determined to be defective. All other installation related problems are assumed to be fault of improper conditions or installation error.
